

## Industrial Labelling Systems do it in any Position.

The **Mectec TF-150** is a freestanding print & apply system of robust construction, labels are printed via the integral **T60** printer then fed onto the “**Tamp-Blow**” applicator pad. On a given signal the applicator moves out to apply the label onto the relevant face of the pack, the application is a combination of tamp & blow, this technique gives reliable contact / adhesion of the label when the pack has an un-even surface!

The **T60** printer used by the **TF-150** system will print text, barcodes, logos, date & time as well as best before dates and counters. The **T60** is a Thermal Transfer printer capable of printing labels widths from 10mm up to 170mm max. All true type fonts can be used in a label design and are downloaded to the printer as required. Labels are designed using the “**MecWin**” windows based label design software then downloaded the printers memory for use in “stand alone” mode. If your labels need to contain variable data they can be accessed via the optional **TG300** keypad where any manual input data e.g. “Batch No” may be entered locally for printing on the label if required.

The **MecWin** program has a built in network function (RS485), this allows up to 31 printer units to be accessed via a single PC. Tasks available include updating label lists and printer configuration.
